

DAWSON'S BIRD CONTROL CASE STUDY

Dawson's Deals with a Bird Infestation in a Distribution Centre

An infestation of birds in a well-known Distribution Centre was causing a nuisance to operations and putting the Centre at risk of contamination, costly liabilities, and damage. They called Dawson's Australia to solve their bird control problem.

A Distribution Centre for a well-known company was nearing completion when the construction company contacted Dawson's.

The client needed a humane, cost-effective solution to stop birds accessing, nesting, and roosting under the awnings and above the cool store. Dawson's Australia recommended installing bird netting to the underside of the awnings and vertical netting to stop birds accessing the space above the cool store.

The only challenges faced during the installation of the netting was working around the construction contractors and their equipment on the new building site. Installing the netting was a simple and straightforward task, since the Dawson's team has the experience, tools and hardware attachments needed to affect a fast and efficient installation.

Bird netting would be one of the most versatile and permanent solution for bird control in this instance. It provided a discreet yet effective exclusion against all types of nuisance birds without inflicting harm on the birds themselves.

Reasons Why Bird Management and Bird Control Is Important

- > Birds, droppings, and their nesting materials can carry over 60 types of transmittable diseases and ectoparasites that can be passed on to other animals and humans.
- > Bird droppings have highly acidic properties that can corrode and stain a building's structural materials.
- > Birds and their droppings can cause contamination to food production and valuable inventory when found nesting in warehouses.
- > Regularly cleaning up bird droppings can cost Australian businesses thousands each year.
- > Droppings and nesting materials can clog drains and gutters and create a fire risk near lighting fixtures.
- > Bird droppings can also be a slip and fall hazard when not cleaned up quickly, which on your business premise could become a costly liability.

Client Feedback

"Very happy with the solution Dawson's recommended. The installers were experienced and worked with us to minimise any disruption to the final stages of construction"

It's important for these reasons that appropriate solutions for bird control are quickly established to avoid further costs and exposure to health risks.

Remember: Proactive action for bird pest control is best because the longer the pest birds are left to nest, the more difficult they are to get rid of.
